

# Designing For How We Respond To The Built Environment

When it comes to designing the built environment, architects and designers must consider not only the functional aspects but also how people respond to and interact with the spaces they create. From the tallest skyscrapers to the smallest

intimate interiors, every element in a built environment has the potential to evoke emotion and shape our experience.

## The Power of Design

Design has the power to either uplift or degrade our moods, influence our behaviors, and even affect our physical well-being. It can create spaces that spark joy, inspire creativity, promote relaxation, or foster productivity. By carefully considering the psychological and emotional impact of design choices, architects and designers can shape environments that enrich our lives.

### Cognitive Architecture: Designing for How We Respond to the Built Environment

by Ann Sussman (2nd Edition, Kindle Edition)

★★★★★ 5 out of 5

## Emotional Responses to Architecture

The way we respond to architecture is deeply rooted in our emotions. Awe-inspiring architecture, such as grand cathedrals or iconic landmarks, can evoke feelings of wonder and admiration. On the other hand, oppressive or poorly designed spaces can make us feel anxious, uncomfortable, or even trapped. It is crucial for designers to understand the impact their creations can have on our emotional well-being.

## **Creating Harmony with Nature**

Nature has long been recognized for its positive impact on our well-being, so it's no surprise that incorporating natural elements into our built environment can improve our overall experience. From the use of natural light and green spaces to the incorporation of natural materials and textures, bringing nature indoors can create spaces that feel more calming, refreshing, and connected to the world outside.

## **Psychology of Color and Lighting**

Color and lighting play a significant role in influencing our emotional and psychological responses. Warm colors, such as reds and yellows, can create a

sense of energy and warmth while cooler tones like blues and greens promote tranquility. Similarly, the quality and intensity of lighting can affect our mood, productivity, and even our sleep patterns. Designers must carefully consider the role of color and lighting to create the desired atmosphere in a space.

## **The Impact of Spatial Layout**

The way a space is organized and laid out can greatly influence how we feel and behave within it. Open floor plans promote social interaction and collaboration, while smaller, more enclosed spaces can offer a sense of privacy and comfort. The careful consideration of room proportions, circulation paths, and furniture arrangements can create spaces that encourage specific activities and foster a sense of community.

## **Designing for Social Interaction**

The built environment has the potential to shape our social interactions and sense of community. Thoughtful urban planning can create vibrant public spaces that encourage socialization and connectivity. Parks, plazas, and pedestrian-friendly streets can promote a sense of belonging and facilitate positive social encounters. When designing residential buildings, communal spaces like shared gardens or gathering areas can foster a sense of community among residents.

## **Accessibility and Inclusivity**

A well-designed built environment should be accessible and inclusive to all individuals, regardless of their physical abilities. Incorporating universal design principles ensures that spaces can be used by people of all ages and abilities comfortably. This includes features like ramps, elevators, wider doorways, and accessible facilities. By considering the needs of everyone, designers can create environments that are welcoming and accommodating to a diverse range of individuals.

## **The Future of Designing for How We Respond to the Built Environment**

As we continue to understand the profound impact of the built environment on our well-being and the importance of sustainable design, the future of architecture and design holds great promise. Innovative technologies and materials can further enhance our experiences and create spaces that respond to our needs. From energy-efficient buildings that promote environmental stewardship to smart cities that optimize functionality, the possibilities are endless.

Designing for how we respond to the built environment is a multifaceted task that requires an understanding of human psychology, emotional well-being, and the

power of thoughtful design choices. By considering factors such as the emotional impact of architecture, the integration of natural elements, the psychology of color and lighting, spatial layout, social interaction, accessibility, and inclusivity, designers can create spaces that go beyond functionality and truly resonate with the individuals who inhabit them.

## Cognitive Architecture: Designing for How We Respond to the Built Environment

by Ann Sussman (2nd Edition, Kindle Edition)

★★★★★ 5 out of 5

In this expanded second edition of Cognitive Architecture, the authors review new findings in psychology and neuroscience to help architects and planners better understand their clients as the sophisticated mammals they are, arriving in the world with built-in responses to the environment. Discussing key biometric tools to help designers ‘see’ subliminal human behaviors and suggesting new ways to analyze designs before they are built, this new edition brings readers up-to-date on scientific tools relevant for assessing architecture and the human experience of the built environment.

The new edition includes:

- Over 100 full color photographs and drawings to illustrate key concepts.

- A new chapter on using biometrics to understand the human experience of place.
- A describing how the book's propositions reframe the history of modern architecture.

A compelling read for students, professionals, and the general public, Cognitive Architecture takes an inside-out approach to design, arguing that the more we understand human behavior, the better we can design and plan for it.
