## Chapter 1: What is Mycorrhizae?

Mycorrhizae are a mutually beneficial symbiotic relationship between plant roots and beneficial fungi called mycorrhizal fungi. These fungi form a network of fine filaments, known as hyphae, that extend far beyond the reach of a plant's roots, effectively acting as an extension of the root system. By forming this underground union, mycorrhizal fungi and plant roots establish a remarkably efficient nutrient exchange system that greatly enhances a plant's ability to access and absorb essential elements from the soil.
