To conclude a fruitful 2012, I am very proud to report that the International Association of Orthodontics and Implantology has successfully built up three innovative pillars, which provide a strong

support for future teaching and learning.

The first pillar is the role of our examiners. We believe that in order to examine, one has to be first examined. Experience doesn't always equal the knowledge necessary to validate today's technologies. Therefore, all of our examiners have to first successfully present their work before examining others'.

Thanks to our examiners Drs. Thomas Han, Kwang Bum Park and John Lin for being such exemplary role models.

The second pillar is the examination process. All cases are evaluated by the ABO grading system, the most reliable system to study treatment results, which we have now integrated into our certification process.

Furthermore, material to be examined is posted on YouTube one week beforehand, to give examiners and audience sufficient time to study and analyze the case and treatment process in detail. The efficiency of the Q and A section certainly speaks for itself, as everyone can easily hit the point.

Congratulations to all the examinees. You should be very proud of your achievements

The third pillar is publication. All diplomats have published at least three articles in IJOI, which are then subsequently transformed into 3-D iBook format and launched on iBookstore. We truly believe this 3-D electronic publication can change learning and teaching, as it is by far the fastest and best way to reach end users around the world.

With these three innovative pillars, we can continue to build an even stronger roof for our members to enjoy learning and teaching underneath, allowing us to stay on top. As Steve Jobs once said, "To lead, rewrite the rules".

Join us. This small step of joining our certification process, may turn out to be a quantum leap in your career.
