"This comprehensive text provides a rich source of perspectives on theorising about the family for scholars, researchers, and students. Another of the book's strengths is the emphasis on multimethod approaches in family research. The book covers an impressive range of topics and issues - marital happiness, adjustment of children in divorce marriages, gay marriage, sibling ties, ethnic families of colour, stepfamilies, aggression culture, work and family, religion, and social policy, to name a few. In summary, this superb volume is highly recommended and amply reflects the many contemporary perspectives on the family." —Philip Siebler, Monash University, Victoria

Family Theory and Research is the reference work on theory and methods for family scholars and students around the world. This volume provides a diverse, eclectic, and paradoxically mature approach to theorizing and demonstrates how the development of theory is crucial to the future of family research.

The Sourcebook reflects an interactive approach that focuses on the process of theory building and designing research, thereby engaging readers in "doing" theory rather than simply reading about it.

An accompanying website, <http://www.ncfr.org/sourcebook>, offers additional participation and interaction in the process of doing theory and making science. Editors Vern L. Bengtson, Alan C. Acock, Katherine R. Allen, Peggye Dilworth-Anderson, and David M. Klein have brought together a prominent group of diverse contributors ranging in race and ethnicity, age and seniority, and gender and sexual orientation.

The Sourcebook begins with a section that sets the context for future family research. The subsequent sections explore changing family patterns, changing family interactions within and across generations, and families and larger social forces. A concluding section discusses issues of teaching family theories and research.
