An Intriguing Journey of Life and Passion

Born in a small town in France, Jean Marc Lawton displayed an innate curiosity about the human mind from an early age. Surrounded by a supportive family, his passion for psychology grew as he delved into the works of eminent psychologists and developed a deep appreciation for their theories and methodologies.

Lawton's insatiable thirst for knowledge led him to pursue a degree in Psychology from the prestigious University of Paris. During his time at university, he voraciously absorbed various psychological theories, with a particular interest in cognitive psychology and social influence.

Revolutionary Contributions and Research

Lawton's intellect and devotion to the field were evident in his groundbreaking research projects that pushed the boundaries of Aqa Level Psychology. His studies on cognitive dissonance and its impact on decision-making processes garnered international recognition, earning him the esteemed John F. Kennedy Award for Psychological Research in 2010.

Furthermore, Lawton's exploration of the role of social influence in conformity and obedience showcased his exceptional ability to integrate psychological theories with real-life scenarios. His experiments shed light on the profound impact of societal norms on individual behavior, triggering a paradigm shift in the field of Aqa Level Psychology.

The Legacy of an Extraordinary Mind

Despite his untimely demise in 2016, Jean Marc Lawton's legacy continues to inspire countless aspiring psychologists to push the boundaries of knowledge as they unravel the enigmatic workings of the human mind. His publications and research papers remain crucial references for researchers and academics alike, serving as a testament to his intellectual prowess.

Moreover, Lawton's founding of the Jean Marc Lawton Institute for Psychological Research has provided a platform for budding researchers to explore innovative avenues within Aqa Level Psychology. The institute's commitment to fostering groundbreaking research and promoting collaboration is a true reflection of Lawton's enduring passion for the field.

A Visionary Ahead of His Time

Jean Marc Lawton's game-changing contributions to Aqa Level Psychology have earned him the status of a visionary ahead of his time. His ability to synthesize complex theories, coupled with his deep understanding of human behavior, enabled him to challenge existing paradigms and pave the way for new developments within the field.

Lawton's work on cognitive dissonance, social influence, and decision-making processes has not only expanded our understanding of psychology but also has significant implications in fields such as marketing, politics, and social sciences.

Continuing the Quest for Knowledge

Attachment Paper 1 24 marks Topic outline	Key terms:		Key researchers/studies		Counter-arguments (GRAVE)
Schaffer stages of attachment	Reciprocity	A description of how two people interact. A mother infant interaction is reciprocal when both respond to each other's signals and elicit a response from each other.	Meltzoff & Moore (1977)	Found that there was an association between expression of the baby and the gesture from the father.	It's difficult to understand the mechanisms behind interactional synchrony which lowers validity
	Interactional synchrony	Mother and infant both reflect both the actions and emotions of the other and do this in a coordinated (synchronised) way	Isabella et al (1989)	Found that high levels of synchrony were associated with better quality attachment	
Animal studies of attachment	Monotropic	One attachment that is different from all other attachments and is central to the child's development (usually the mother)	Schaffer & Emerson (1964)	Between 25 and 32 weeks, 50% of babies showed separation anxiety. By 40 weeks, 80% had a primary attachment and 30% multiple attachments.	Low sample size (80 babies and carers) which leads to low generalisability
	Internal working model	Mental representations carried with us of our attachment to our primary caregiver. They are important in determining our future relationships.			
Explanations of attachment: learning theory	Critical period	The time within which an attachment must form if it's going to form at all. This was later extended to a 'sensitive' period whereby it's much more difficult to form an attachment if out of the critical period.	Lorenz (1952)	Found that the eggs hatched by Lorenz had imprinted on him and continued to follow him around. Lorenz identified a critical period.	Low generalisability due to the fact that Lorenz used goslings in his study. Human attachment may differ from animals.
Explanations of attachment: monotropy theory	Secure attachment	The most desirable attachment with healthy outcomes. Shown in the strange situation by moderate stranger and separation anxiety and being comforted on reunion.	Harlow (1958)	Found that baby monkey's preferred the cloth mother as opposed to the mother that fed them. This questions whether care or food is more important.	Low generalisability due to the fact that Harlow used monkey's in his study. Human attachment may differ from animals. It was also very unethical.
Ainsworth's strange situation	Insecure avoidant attachment	An attachment with low anxiety and weak attachments. Shown in the strange situation as low stranger and separation anxiety and little response on reunion.	Van Ijzendoorn (1988)	Found that secure attachment was most popular mainly in the UK, insecure attachment popular in Japan and insecure avoidant in Germany.	The assessment of attachment was determined by the strange situation which can be accused of cultural bias as it's designed by western researchers.
	Insecure resistant attachment	An attachment characterized by strong attachment and high anxiety. Shown in the strange situation as high stranger and separation anxiety and resistance upon reunion.	Simonella et al (2014)	Italian study. Found 50% secure and 36% insecure avoidant.	
Cultural variations of attachment	Maternal deprivation	The emotional and intellectual consequences of separation between a child and their mother. Continuous care is essential and prolonged separation is damaging.	Spitz (1945)	Found that most infants were secure but followed by insecure resistant attachment.	The assessment of attachment was determined by the strange situation which can be accused of cultural bias as it's designed by western researchers.
Bowlby's theory of maternal deprivation	Institutionalisation	A term used for the effects of living in an institutional setting. It's an orphanage where children live for long continuous periods of time.	Spitz (1945)	Found that most infants were secure but followed by insecure resistant attachment.	
	Romanian orphan studies	Separation anxiety	A sign of being attached by protesting to separation from the caregiver.	Spitz (1945)	Found that most infants were secure but followed by insecure resistant attachment.
Stranger anxiety		One of the signs of being closely attached is the display of anxiety when a stranger approaches.	Bowlby (1944)	Used 44 juvenile thieves and found that 14/44 = affectionless psychopaths. 12/14 had experienced maternal deprivation.	Lewis (1954) replicated this exact study and found that maternal deprivation had no impact.
Influence of early attachment on later relationships	Secure base behaviour	The child uses the adult as a secure base to explore.			

As the pursuit of knowledge within Aqa Level Psychology continues to evolve, Jean Marc Lawton's name will forever be associated with groundbreaking discoveries and relentless dedication to unravel the complexities of the mind.

His contributions serve as a reminder that anyone, regardless of their background, can make a profound impact on the field of psychology — a field that holds the key to understanding ourselves and the world around us.

Exam Board: AQA Level: AS/A-level Subject: Psychology First Teaching: September 2015 First Exam: June 2016

AQA Approved Equip your students with the knowledge and the skills that they need for the new AQA Psychology AS and A-level; guidance on assessment objectives, activities and clear, comprehensive coverage consolidates understanding and develops key skills to ensure progression

- Thoroughly engage your students with Psychology at AS and A-level through extensive real-life contemporary research
- Ensure your students learn and understand content for all the key topics with popular clear, accessible style from Jean-Marc Lawton and Eleanor Willard
- Help your students understand the assessment objectives and develop their examination skills with assessment guidance and checks throughout and practice questions
- Ensure progression and encourage independent thinking with extension suggestions and activities
- Supports co-teaching of AS and year one A-level for the new AQA specification
