Nearly eighty women have sat on the throne of England, either as queen regnant or queen consort and the voices of all of them survive through their own writings and those of their contemporaries. The primary role of the queen over the ages was to provide an heir. Catherine of Aragon found this to her cost, divorced by Henry VIII for failing to produce a healthy son. The birth of an heir was also a route to power for a queen and Eleanor of Aquitaine became the most powerful woman in Europe during the reigns of her sons.

Strong relationships could also develop between the queens and their husbands. Edward VIII even abandoned his throne when forced to choose between the crown and his lover, Wallis Simpson. Not all marriages were happy and queens such as Isabella of France and Catherine Howard took lovers to escape their marriages. The unhappy Sophia Dorothea of Celle was imprisoned for over thirty years by her husband George I when her affair was discovered. Her lover, Count von Konigsmarck was murdered. Most queens made arranged marriages and were used by their families to build alliances. Some queens were able to break away from this control. Queen Victoria spent her childhood secluded with her overprotective mother, even sharing the same bedroom until the day when she was proclaimed queen and finally freed herself from her mother's control.
