The Value of a Clinico Pathological Atlas

A clinico-pathological atlas of cardiovascular diseases combines clinical data, patient histories, and pathological findings to create a visual representation of different cardiovascular conditions. This visual representation not only aids in differential diagnosis but also helps in understanding the underlying causes, pathophysiology, and progression of each disease. By studying the intricate details of diseased hearts and blood vessels, medical professionals can enhance their knowledge and provide better care to patients.

A Comprehensive Resource for Healthcare Professionals

The clinico-pathological atlas we present here is designed to be an all-inclusive resource for healthcare professionals. With over 3000 words packed with invaluable information and visually stunning images, this atlas covers a wide range of cardiovascular diseases, including but not limited to:

The objective of this Atlas is to contribute to the knowledge of morphological findings of the main cardiovascular diseases among the various specialists who deal with people affected of heart diseases: cardiologists and cardiovascular surgeons, clinical and forensic pathologists, coroners, sports medicine doctors. The interest in cardiovascular pathology, neglected for years in many countries, is increasing worldwide and we are witnessing the revitalization of a discipline, which, in collaboration with clinicians, is making great contributions to the fight against heart diseases and sudden-unexpected deaths. This atlas of cardiovascular diseases is the result of close collaboration between Spanish specialists in cardiology and in cardiovascular pathology and describes the clinical and pathologic features (gross and histopathological) of major cardiovascular diseases in adults, especially those acquired, but also treat relevant congenital anomalies. This book contains 635 images, 78 tables and graphics distributed in 12 chapters across the spectrum of diseases that can be found in each of the structures of the cardiovascular system (aorta, pulmonary vessels, coronaries, valves, myocardium, pericardium and conduction system). The coordinated work of forensic pathologists from different cities in Spain and cardiologists (primarily from the Hospital Universitario Puerta de Hierro de Madrid) has assembled in all chapters their two worlds (forensic pathology and

cardiology) to achieve a practical work with the aim to serve as a practical tool for multiple specialists.
